

Building on quality

Hydraulic Slab and Block Splitter

The power of a 10 Ton hydraulic piston is multiplied by levers to give over 20 Ton of cutting force. With power like this, almost all concrete products can be split easily.

- Adjustable blade height, for all 'flat faced' products up to 235mm.
- Heavy weight construction, takes a lot of abuse.
- Wheels attached, easy 'on site' transport.
- Reversible blades with 3 cutting edges.
- Large work supports, keeps the cut vertical.

	Max. cut width mm	Max. cut height mm	Length mm	Width mm	Height mm	Weight Kg	Order Code
